Professional Summary

I am a Junior Software Engineer with hands-on experience: designing, developing, and deploying full-stack web applications using the following: React, TypeScript, JavaScript, Node.js, Express.js, REST APIs, GraphQL, and database technologies. I am experienced building scalable frontend components, backend services, authentication systems, and API integrations while following modern software engineering practices. I have a strong foundation in: debugging, testing, Git workflows, Agile collaboration, and writing maintainable code. I am passionate about learning new technologies, leveraging AI-assisted development tools, and growing into an engineer capable of owning features end-to-end.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3

Frontend: React, Tailwind CSS, Responsive UI, Component-Based Architecture

Backend: Node.js, Express.js, REST APIs, GraphQL, Authentication & Authorization

Databases: MongoDB, MySQL, SQL Fundamentals

Tools & Platforms: Git, GitHub, Google Cloud, Postman, Swagger/OpenAPI, Jira, Webpack

Software Engineering: Agile/Scrum, Code Reviews, Debugging, Testing Fundamentals, CI/CD Concepts, Software Development Lifecycle

Artificial Intelligence: AI-Assisted Development, AI Development Concepts

Software Engineering Experience

Freelance Software Developer

Self-Employed

Remote

July 2026 - Present

- Developed responsive web applications using: React, JavaScript, HTML, CSS, [Node.js](#), [Express.js](#).
- Built reusable components, REST APIs, and user-focused interfaces using modern development.
- Translated client requests into functional web solutions while maintaining responsive designs.
- Debug, test, and refine applications throughout the development.

Nexus Partner Pipeline C7

Software Engineering Extern

Remote

January 2026 - March 2026

- Developed a responsive dashboard application using React, TypeScript, and Tailwind CSS.
- Integrated frontend with both GraphQL APIs and MySQL-backed services.
- Collaborated with stakeholders and engineering teams to design and deliver software solutions.
- Participated in sprint planning, code reviews, stand-ups, and demonstrations.
- Debugged issues, incorporated feedback and improved the application.
- Built reusable components and maintained scalable front-end architecture.
- Presented completed technical solutions and product enhancements to stakeholders.

TripleTen

Remote

Peer Support Tutor (Volunteer)

December 2024 – March 2026

- Mentored students in full-stack development including React, JavaScript, backend APIs, and databases
- Assisted with debugging, software architecture decisions, and implementation best practices.
- Guided students through real-world coding challenges and technical problem solving.
- Fostered collaborative learning environments and effective technical communication.

Projects

Everything Pokemon- Full-Stack Application

Live Application: <https://pokemon-website-frontend.vercel.app/>

Tech: React, [Node.js](#), Express, MongoDB, JWT

- Built a full-stack web application enabling users to create their own favorite Pokémon collections.
- Developed RESTful API services for user data management.
- Implemented secure authentication and protected routes using JWT
- Integrated the PokeAPI and transformed data for frontend consumption
- Structured frontend and backend services to support scalability and maintainability
- Deployed and maintained production-ready application environments

Authentication API System | Backend Project

GitHub Source: <https://github.com/Agent610/Authentication-API>

Tech: Node.js, Express.js, MongoDB, JWT, bcrypt, Zod, Nodemailer, Swagger, REST APIs

- Built a secure RESTful authentication platform using both Node.js and [Express.js](#).
- Implemented JWT authentication, refresh token workflows, and role-based access control.
- Developed API documentation using Swagger/OpenAPI.
- Tested API endpoints and workflows using Postman.
- Applied request validation, password hashing, and security best practices.
- Structured backend architecture using controllers, middleware, services, and utilities.
- Utilized Git and GitHub for source control and collaborative development workflows.

Weather Dashboard | Frontend Application

Live Application: <https://weather-dashboard-5qp4.vercel.app/>

Tech: React, JavaScript, CSS, APIs

- Developed a responsive Frontend application displaying real-time weather information.
- Built reusable React components and responsive layouts for desktop, tablet, and mobile views.
- Implemented the following: city search, temperature conversion and dynamic weather updates.
- Applied performance optimization techniques to improve usability.

BreatheWell - Team Web Application

Live Application: <https://tylub001.github.io/CalmCoders2025/>

Tech: JavaScript, HTML, CSS (BEM), Flexbox

- Collaborated within a team environment to develop a mindfulness-focused web application.
- Used Git workflows and Live Share for real-time collaboration.
- Applied scalable CSS methodologies and responsive design practices.

Professional Experience

Burlington Coat Factory

Danbury, CT

Receiving Associate → Receiving Lead

October 2022 – Present

- Coordinated inventory and operational workflows in a fast-paced environment.
- Trained employees on procedures, systems, and operational standards.

- Demonstrated leadership, communication, and problem-solving skills while managing daily operations
- Collaborated across teams to maintain productivity and process efficiency.

Education

TripleTen Software Engineering Program:

Professional Certification
October 2023-July 2025

- Completed 1,000+ hours of hands-on full-stack software engineering training.
- Built production-ready applications using React, Node.js, APIs, and modern databases.
- Gained experience with authentication systems, software architecture, deployment, and Agile collaboration.
